## **Amendments to the Abstract**

Please add the following Abstract to this application.

-- A method and apparatus enables users to personalize the rating limits used for content blocking in parental control systems. According to an exemplary embodiment, an apparatus (100)-includes an interface (40) for detecting a user input indicating the acceptability of a rating sample having a first rating from a first source. A processor (50)-generates a first transition point based on the user input and the first rating, and uses the first transition point to determine whether data from the first source is output or blocked. --
